

# Basic Code Analysis: Dependency Version Conflict Resolution

Duration : 30 Min.

## Scenario

An application fails to build due to conflicting library versions in 'package.json'. Identify the conflicting package name and required override version.

## Target File Location & Creation

**File to Create/Update:** student\_workspace/solution.json

## Task Objectives

Perform the following actions inside the student\_workspace directory: - Create/update 'solution.json' inside 'student\_workspace/' with fields 'conflicting\_package' ('axios') and 'resolved\_version' ('1.6.0').

## Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect the scenario input files in student\_workspace/.
3. Create/update the file student\_workspace/solution.json and populate it with valid parameters and configurations.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your work by running python run.py in the terminal before submitting.

## Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

## Grading Criteria

Your performance will be evaluated based on the following test cases:

| Test Case | Requirement                                   | Marks   |
|-----------|-----------------------------------------------|---------|
| TC1       | solution.json exists in student_workspace/    | 3 Marks |
| TC2       | Conflicting package name ('axios') identified | 4 Marks |

|     |                                              |         |
|-----|----------------------------------------------|---------|
| TC3 | Target resolved version ('1.6.0') documented | 3 Marks |
|-----|----------------------------------------------|---------|

Total Score: 10 Marks

## Important Notes

---

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
