

NJS_Q03_E: Express.js Exception Boundaries

Difficulty: EASY

Scenario

A Node.js web application is exhibiting runtime anomalies or configuration errors in production. You are tasked with writing clean, async, and correct JavaScript code to solve the requirements.

Username & Naming Conventions

- Resources must utilize your candidate suffix prefix (<username>-<exam_code>).

Task Objectives

- Node.js Optimization & Code Resolution:** Set up global process listeners for `uncaughtException/unhandledRejection` and wrap routes in an error boundary.
- Ensure your changes pass all local verification tests.

Verification

- Local run test script `run.py` can be executed to verify local workspace properties.
- Central validation runs queries against the live workspace to verify integration.

Grading Criteria

- TC1: File `server.js` exists in workspace** (4 Marks)
- TC2: Global `uncaughtException` listener registered** (4 Marks)
- TC3: Global `unhandledRejection` listener registered** (4 Marks)
- TC4: Express error middleware handles async exceptions** (4 Marks)
- TC5: Application shuts down gracefully on uncaught exceptions** (4 Marks)

Important Notes

- Always check that your syntax compiles without errors.
