

GenAI Ops: Prompt Refinement & Iterative Optimization

Duration : 30 Min.

Scenario

Iteratively improve a root cause analysis prompt across 3 revisions, increasing specificity, role clarity, and output constraints.

Target File Location & Creation

File to Create/Update: student_workspace/iterations.json **Input Resource File to Inspect:** student_workspace/base_rca_prompt.txt

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect base_rca_prompt.txt in student_workspace/. - Create or update student_workspace/iterations.json and populate it with valid analysis results.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect base_rca_prompt.txt inside student_workspace/.
3. Create or open student_workspace/iterations.json in student_workspace/ and record your answers.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	iterations.json contains 3 distinct iteration entries	3 Marks
TC2	Iteration 3 includes explicit JSON output schema constraints	4 Marks

TC3	Prompt text length increases monotonically across iterations	3 Marks
-----	--	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
