

GenAI Ops: KQL & Splunk Query Generation Prompts

Duration : 30 Min.

Scenario

Design a prompt template that instructs an LLM to generate syntactically correct Splunk SPL queries without inventing unsupported search commands.

Target File Location & Creation

File to Create/Update: student_workspace/spl_prompt_template.json **Input Resource File to Inspect:** student_workspace/kql_prompt_requirements.txt

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect kql_prompt_requirements.txt in student_workspace/. - Create or update student_workspace/spl_prompt_template.json and populate it with valid analysis results.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect kql_prompt_requirements.txt inside student_workspace/.
3. Create or open student_workspace/spl_prompt_template.json in student_workspace/ and record your answers.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	spl_prompt_template.json exists	3 Marks
TC2	Constrains output to valid Splunk SPL commands (stats, transaction, eval)	4 Marks

TC3	Prohibits markdown code block wrappers if JSON requested	3 Marks
-----	--	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
