

Databricks Lab : Cluster Operations & Terminations

Duration : 60 Min.

Scenario

To optimize development costs, you are tasked with provisioning a single-node cluster with auto-termination configured to 20 minutes.

Input Details

The environment has been pre-configured with the following resources: - **Workspace:** Pre-configured through KodeBuck Service credentials (DATABRICKS_HOST, DATABRICKS_TOKEN)

Username & Naming Conventions

Your candidate prefix is a combination of your username (the part of your email/login before the @ or _ symbol) and exam code. For example, if your username is student (or student_labskraft.com) and your exam code is exam123, your prefix is **student-exam123**.

You must name your resources accordingly:

- **Cluster Name:** <prefix>-ops-cluster (e.g. student-exam123-ops-cluster)

Task Objectives

1. Provision Cluster

- Name the cluster <prefix>-ops-cluster.
- Set auto-termination to 20 minutes.
- Enable Single Node mode and disable Photon Acceleration.

Verification

Once you have performed the tasks, you can run the verification script to check your progress and receive your score. The verification system will check the actual resources in the environment.

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
-----------	-------------	-------

TC1	Cluster existence (<prefix>-ops-cluster exists)	4 Marks
TC2	Auto-termination setting (20 minutes)	4 Marks
TC3	Single Node mode check (0 workers, singleNode profile)	4 Marks
TC4	Node Type check (Standard_F4)	4 Marks
TC5	Photon Acceleration Disabled	4 Marks

Total Score: 20 Marks

Important Notes

- Ensure all resource names contain your candidate username prefix in lowercase.
- Check that your script compiles cleanly and contains no syntax errors.
