

NJS_Q01_E: Event Loop Phase Execution Order

Difficulty: EASY

Scenario

A Node.js web application is exhibiting runtime anomalies or configuration errors in production. You are tasked with writing clean, async, and correct JavaScript code to solve the requirements.

Username & Naming Conventions

- Resources must utilize your candidate suffix prefix (<username>-<exam_code>).

Task Objectives

- Node.js Optimization & Code Resolution:** Create a script `index.js` that schedules callbacks to log checkpoint strings in a precise order.
- Ensure your changes pass all local verification tests.

Verification

- Local run test script `run.py` can be executed to verify local workspace properties.
- Central validation runs queries against the live workspace to verify integration.

Grading Criteria

- TC1: File `index.js` exists in workspace** (4 Marks)
- TC2: Execution returns exit code 0** (4 Marks)
- TC3: Output sequence matches event loop phase expectations** (4 Marks)
- TC4: No syntax or runtime errors** (4 Marks)
- TC5: Verify `process.nextTick` priority** (4 Marks)

Important Notes

- Always check that your syntax compiles without errors.
