

Log Analysis: Distributed Tracing & Correlation ID Tracking

Duration : 30 Min.

Scenario

An API request failed across a multi-tier microservice architecture. Follow the correlation ID ('corr-8842') across gateway, order, and payment service logs to find the failing service.

Target File Location & Creation

File to Create/Update: student_workspace/solution.json **Input Resource File to Inspect:** student_workspace/distributed_trace.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect distributed_trace.log in student_workspace/. - Edit solution.json and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect distributed_trace.log inside student_workspace/.
3. Open solution.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	solution.json exists	3 Marks
TC2	Failing microservice name correctly identified	4 Marks

TC3	HTTP error status code correctly mapped	3 Marks
-----	---	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
