

Log Analysis: W3C & GELF Structured Log Format Validation

Duration : 30 Min.

Scenario

A Graylog ingest pipeline is rejecting incoming logs. Audit W3C and GELF log format specifications to fix invalid field types.

Target File Location & Creation

File to Create/Update: student_workspace/gelf_log.json **Input Resource File to Inspect:** student_workspace/w3c_access.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect w3c_access.log in student_workspace/. - Edit gelf_log.json and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect w3c_access.log inside student_workspace/.
3. Open gelf_log.json in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	gelf_log.json has valid JSON schema	3 Marks
TC2	Mandatory '_host' and 'short_message' fields present	4 Marks

TC3	Numeric syslog level specified correctly	3 Marks
-----	--	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
