

Log Analysis: Grok Pattern Field Extraction

Duration : 30 Min.

Scenario

An Logstash ingestion pipeline needs a custom Grok pattern to parse Apache access logs. Construct a valid Grok pattern.

Target File Location & Creation

File to Create/Update: student_workspace/grok_pattern.txt **Input Resource File to Inspect:** student_workspace/nginx_access.log

Task Objectives

Perform the following actions inside the student_workspace directory: - Inspect nginx_access.log in student_workspace/. - Edit grok_pattern.txt and record the required log analytics or findings.

Instructions to Perform the Task

1. When your workspace loads in **VS Code**, use the **Explorer** panel on the left to locate your files.
2. Open and inspect nginx_access.log inside student_workspace/.
3. Open grok_pattern.txt in student_workspace/ and perform the required modifications.
4. Save your changes (Ctrl + S or Cmd + S).
5. Open the built-in terminal by clicking **Terminal > New Terminal** from the top menu.
6. Verify your progress by running python run.py locally in the terminal.

Validation

Once you have saved your files and verified your progress, return to the platform dashboard and click the **"Run Test" / "Verify"** button. This will automatically evaluate your changes and generate your score!

Grading Criteria

Your performance will be evaluated based on the following test cases:

Test Case	Requirement	Marks
TC1	grok_pattern.txt exists	3 Marks
TC2	%{IP:clientip} or %{IPV4:clientip} pattern included	4 Marks

TC3	%{NUMBER:status} or %{INT:status} pattern included	3 Marks
-----	---	---------

Total Score: 10 Marks

Important Notes

- This is an auto-evaluated question. Ensure all code edits are properly saved and the 'run.py' checks pass before submission.
